

## Opportunity of India's urbanization to 2030

**5** times – the number by which GDP will have multiplied by 2030

**590** million people will live in cities, nearly twice the population of the United States today

**270** million people net increase in working-age population

**70** percent of net new employment will be generated in cities

**91** million urban households will be middle class, up from 22 million today

**68** cities will have population of 1 million plus, up from 42 today; Europe has 35 today

**\$1.2** trillion capital investment is necessary to meet projected demand in India's cities

**700–900** million square meters of commercial and residential space needs to be built— or a new Chicago every year

**2.5** billion square meters of roads will have to be paved, 20 times the capacity added in the past decade
